about everywhere

Intiend MapServer

Intiend MapServer now provides everyone with access to interactive maps on their websites without acquiring any hardware, software or data. AfriGIS MapServer is a unique solution for rendering spatial data (maps, images, and vector data) to create spatially-enabled software applications such as websites, mobile and desktop applications.

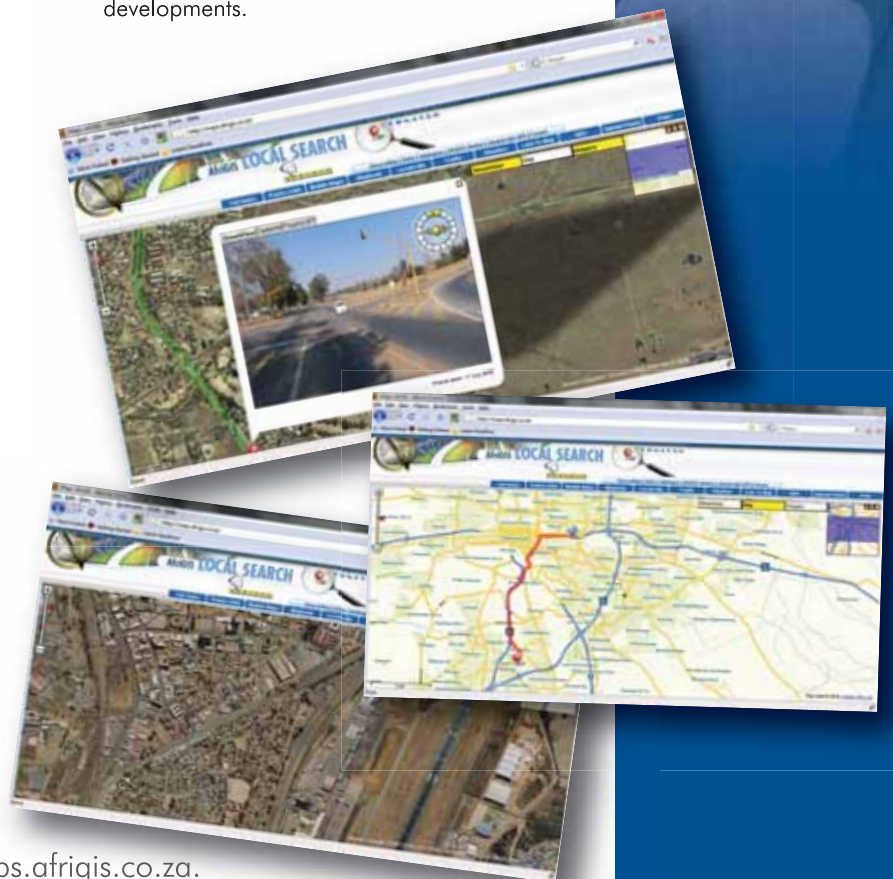

Intiend MapServer is the solution for easy implementation of interactive maps on your website or application.

The capability to perform an intelligent search for locations on the map is a standard functionality of the solution. A route planner has also been implemented for MapServer to find point to point driving directions and maps. The results are shown using user-friendly icons for driving directions and a street level map showing the route between origin and destination. It is possible to switch between a street map, satellite image/aerial photography or hybrid views.

Key Benefits

Some of the key benefits of Intiend MapServer are:

- Completely customisable into any application.
 - Renders high quality street maps and satellite image/aerial photography at high speed.
 - Provides accurate driving directions with turn by turn instructions.
 - Provides intelligent search capabilities to quickly find locations on the map.
 - Highly scalable and able to operate in a clustered environment.
 - Can be used for mobile application developments.
- Intiend MapServer is integrated with all the AfriGIS datasets to provide high quality maps of streets, addresses, land parcels, points of interest including convenience outlets, financial institutions, retail outlets, shopping centres, property ownership, property pricing and more.
 - Easy integration with code samples and clear documentation. Intiend MapServer can be easily implemented within minutes using the well documented JavaScript API.
